**BEFORE THE BOARD OF PATENT APPEALS
AND INTERFERENCES**

Paper No. 12

Application Number: 09/627,373
Filing Date: July 28, 2000
Appellant(s): CUOMO ET AL.

MAILED

FEB 03 2004

GROUP 3600

DUKE W. YEE
For Appellant

EXAMINER'S ANSWER

This is in response to the appeal brief filed December 10th, 2003.

Art Unit: 3621

(1) *Real Party in Interest*

A statement identifying the real party in interest is contained in the brief.

(2) *Related Appeals and Interferences*

A statement identifying the related appeals and interferences which will directly affect or be directly affected by or have a bearing on the decision in the pending appeal is contained in the brief.

(3) *Status of Claims*

The statement of the status of the claims contained in the brief is incorrect. A correct statement of the status of the claims is as follows:

This appeal involves claims 9-17, 22-29, 38-46, 51-58, 60, 62 and 63.

Claim 1-8, 18-21, 30-37, 47-50, 59 and 61 have been canceled in amendment A, *see paper no. 6.*

(4) *Status of Amendments After Final*

The appellant's statement of the status of amendments after final rejection contained in the brief is correct.

(5) *Summary of Invention*

The summary of invention contained in the brief is correct.

(6) *Issues*

The appellant's statement of the issues in the brief is correct.

Art Unit: 3621

(7) *Grouping of Claims*

Appellant's brief includes a statement that claims 9-17, 22-29, 38-46, 51-58, 60, 62 and 63 do not stand or fall together and provides reasons as set forth in 37 CFR 1.192(c)(7) and (c)(8).

(8) *Claims Appealed*

The copy of the appealed claims contained in the Appendix to the brief is correct.

(9) *Prior Art of Record*

5,884,312

Dustan et al

3-1999

(10) *Grounds of Rejection*

The following ground(s) of rejection are applicable to the appealed claims:

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 22-29, 51-58, and 62 are rejected under 35 U.S.C. 102(b) as being anticipated by Dustan et al

3. Regarding claims 20, 25, 26, 28, 51, 54, 57 and 62 Dustan et al, figures 5 and 6, teach a system and method for securely accessing information from data sources through a network such that Applicants' step of sending a first request reads on the menu selection at step 218,

Art Unit: 3621

Applicants' credential reads on the account number and password at step 176, Applicants' session identification reads on step 216, Applicants' second request reads on step 234.

4. Regarding claims 21, 29, and 58: Dustan et al teach that each menu selection utilize scripts which are assigned a URL, column 15, lines 9 - 11.
5. Regarding claim 22: Dustan et al teach that the session id is also verified, column 9, lines 27 - 30.
6. Regarding claims 23 and 52: Applicants' user name and password reads on the account number and password of Dustan et al.
7. Regarding claims 24 and 53: Dustan et al teach that the session id is generated based on the date and time, considered to be random.
8. Regarding claim 55: Dustan et al disclose storing the cookie, column 10, lines 37 - 43.

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claims 9-17, 38-46, 60 and 63 rejected under 35 U.S.C. 103(a) as being unpatentable over Dustan et al in view of Shi et al.
11. Regarding claims 9, 11, 13, 14, 16, 38, 42, 45, 60 and 63 Dustan et al, figures 5 and 6, teach a system and method for securely accessing information from data sources through a

Art Unit: 3621

network such that Applicants' step of sending a first request reads on the menu selection at step 218, Applicants' credential reads on the account number and password at step 176, Applicants' session identification reads on step 216, Applicants' second request reads on step 234. Dustan et al fail to teach that associating the presented credential with session data. However, Shi et al teach associating the presented credential with session data in abstract, figs 1, 3 and column 3 lines 22-46. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Dustan et al's inventive concept to include Shi et al's associating the presented credential with session data because this would have identifier to be used as a pointer into the in-memory credential database, and the credential is then retrieved and used to facilitate multiple file accesses from the distributed file system.

12. Regarding claims 10 and 39: Applicants' user name and password reads on the account number and password of Dustan et al.

13. Regarding claims 12 and 41: Dustan et al teach that the session id is generated based on the date and time, considered to be random.

14. Regarding claim 22: Dustan et al teach that the session id is also verified, column 9, lines 27 - 30.

15. Regarding claim 43: Dustan et al disclose storing the cookie, column 10, lines 37 - 43.

16. Claims 6, 15, 27, 35, 44 and 56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dustan et al in view of Beyeh et al.

Although Dustan et al do not specifically disclose that the session identification data structure is in a rewritten uniform resource locator, Beyeh et al do teach that the URL can be overwritten as another method of keeping track of the URL's visited by the client. Therefore, it is

Art Unit: 3621

considered that it would have been obvious to one of ordinary skill in the art at the time of the invention, to overwrite the URL, as disclosed by Beyeh et al if, for instance, cookies were not used and/or as another method of keeping track of the URL's visited by the client.

(11) Response to Argument

A. Appellant argue that claim 22 has been erroneously rejected under 35 USC 102(b) as every element of the claimed invention is not identically shown in a single reference. Appellant argues that the prior art fails to teach “retrieving a session data structure including a second credential in response to the session identification being valid or determining whether the first credential and the second credential match.” Examiner respectfully disagrees with Appellant’s characterization of Dustan’s inventive concept. Dustan teach a system wherein when a user selects a desired function, database management system will initiate the corresponding stored procedure. For example, when a user desires to check a particular stock quote, database management system will initiate check quote stored procedure. Before actually attempting to access the associated data source, check quotes stored procedure will execute a check access stored procedure. The check access stored procedure is a security function. Generally though, check access stored procedure will receive the session id and account number that was provided when the user requested the current function. This information will be compared to the session id and account number that are stored within user table for verification. This event will then generate a record within activity log table to provide a record of the event. Assuming that access is allowed, control returns to check quotes stored procedure where check quote registered procedure is then executed (*see column 15 lines 36-56*).

Art Unit: 3621

B. Appellant further argues with respect to claim 9 of group II, a prima facie obviousness has not been established and that the prior art fails to teach “determining whether the credential is valid for both the client and the session data or sending the information to the client in response to the session identification and the credential being valid.” Examiner respectfully disagrees with Appellant characterization of the prior art. Dustan et al teach a system wherein user may then desire to check portfolio information that is stored on some disparate data source. In response to requesting access to portfolio information, the client also provides the session id and account number back to database server where it is once again verified. Generally though, database server will verify the session id to ensure that the user has privileges or rights to perform the requested function. If so, the portfolio data is retrieved from the disparate data source using a stored procedure and a registered procedure of database server and the information is provided back to the user in any of a variety of formats, such as web page, an e-mail, or as a voice message (*see column 9 lines 17-44*).

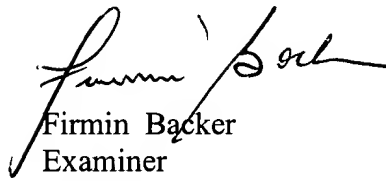

C. Appellant argues that Group III (claim 62) was not properly rejected. Examiner respectfully disagrees with Appellant. A typographical error was committed by the Examiner in rejecting numbering the claims rejected in paragraph 3 in the final rejection. However, claim 62 is listed along with claim 20, 25, 26, 28, 51, 54 and 57 in paragraph 4. Therefore, claim 62 is properly rejected.

For the above reasons, it is believed that the rejections should be sustained.
